

# HYDRAULIC ARMS

Mechanical Engineering Project STEM.

Universidad de Cantabria - IES Tomás Navarro Tomás  
(Albacete)

We discussed how to build the arm in groups

Then we made an agreement and designed a model

We cut out the pieces...

lined them with masking tape...

... and glued all together

We also drilled the syringes...

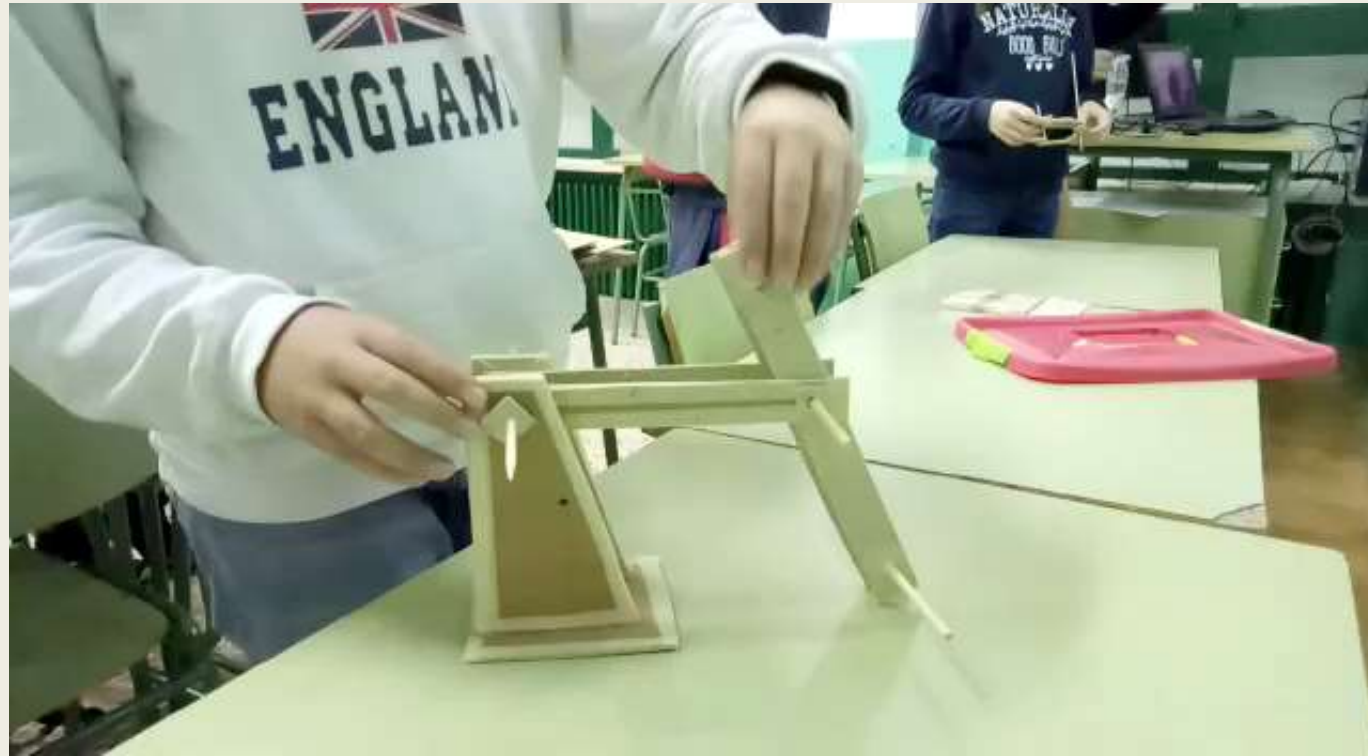

... and joined altogether.

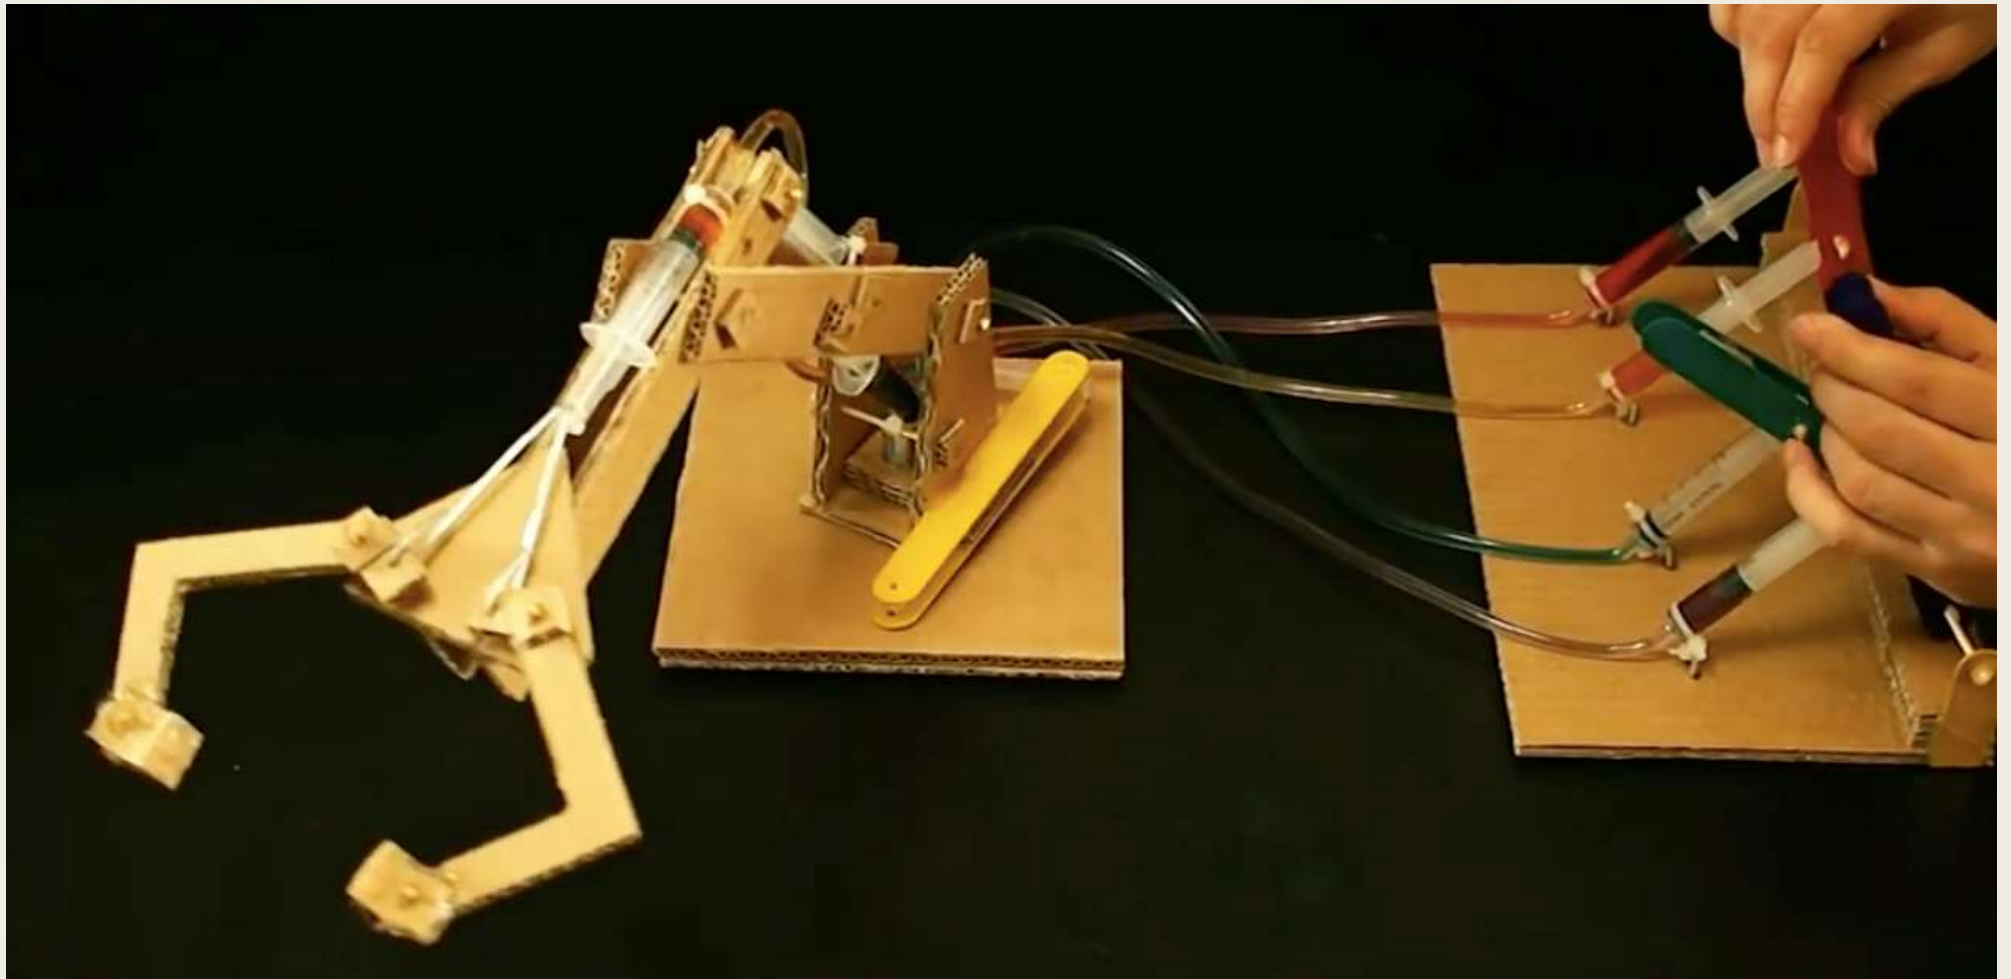

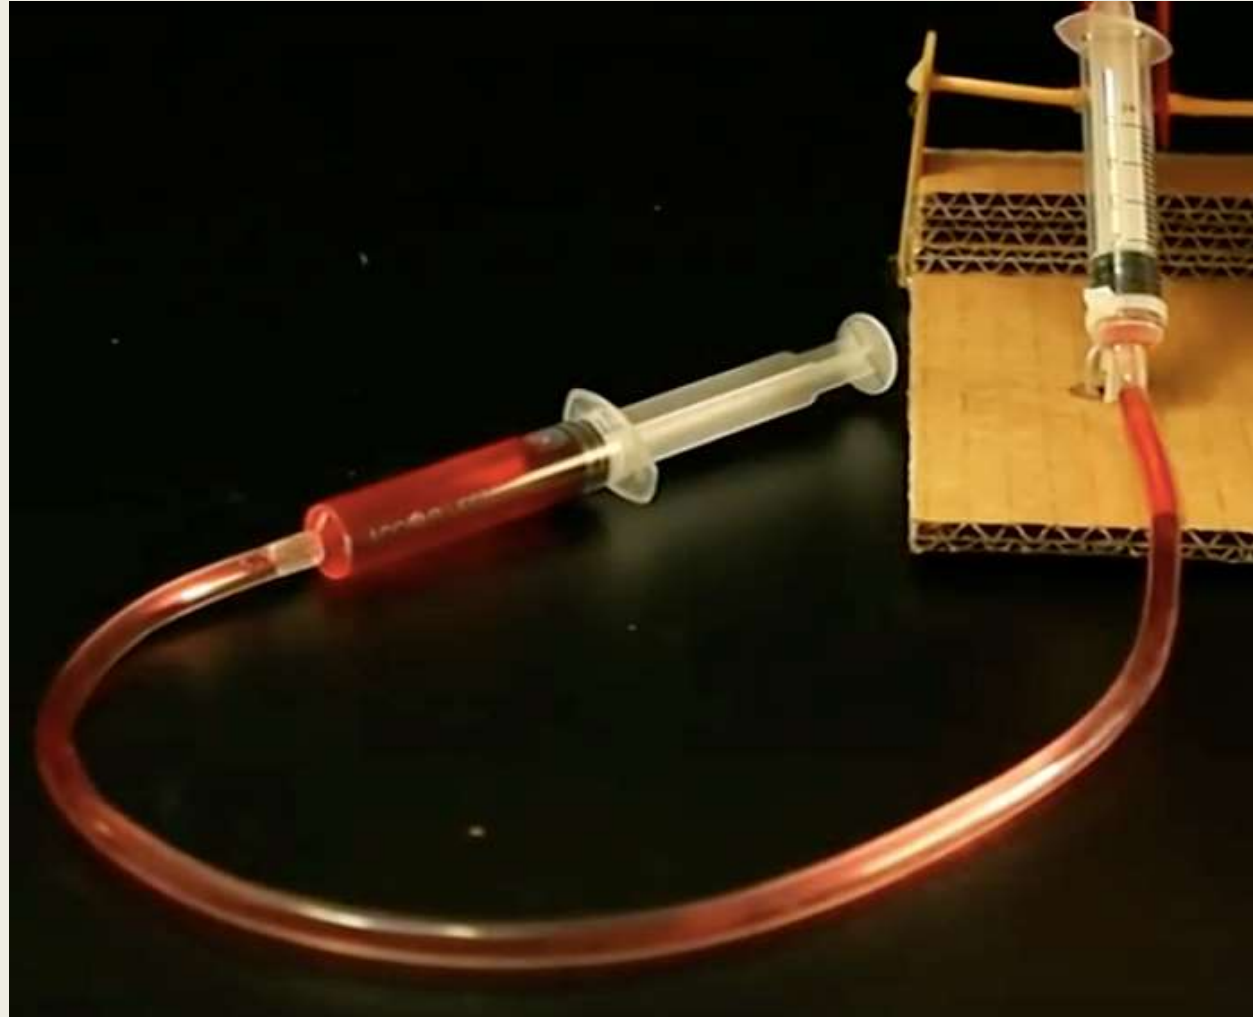

Be careful!

Now, we have to join the syringes with tubes and place them properly

Finally, we fill them with water...

... and ... here you are!
